COMPANY REPORT

Strong cash flow could accelerate hybrid redemption

HKFoods achieved a material and expected improvement in earnings in a challenging operating environment. The faster-than-expected strengthening of the balance sheet in H1 could, we estimate, enable the redemption of the hybrid bond as early as September 2025, which could have a moderately positive impact on the risk and value creation profile of the share. We raise our recommendation to Accumulate (previously Reduce) and our target price to EUR 1.7 (previously EUR 1.5).

Earnings improved in a challenging environment

In Q2, revenue dropped 3.5% year-on-year due to factors such as the timing of high export volumes in the comparison period, strikes, challenges with beef availability, and the impact of the cool summer on demand for barbecue products. However, the company was able to increase its adjusted EBIT to 6.5 MEUR (Q2'24: 4.4 MEUR, our estimate: 7.1 MEUR) through improved operational efficiency and favorable sales mix, both of which were particularly evident in the gross margin (+1.3 pp y/y). Cash flow from operating activities in Q2 was stronger than in the comparison period and our projections, and net working capital is now 14 MEUR lower than a year ago, partly due to beef inventory levels, which the company also expects to remain low in the near future.

Rate of profit growth decreasing

We slightly lowered our revenue forecasts for 2025–27 (by approximately 2%) but increased our EBIT forecasts modestly (by 1–4%) as the company demonstrated further progress in its turnaround during Q2. Our EBIT forecast for H2 is 1 MEUR lower than a year ago due to factors such as rising beef prices and strong results in the comparison period, but we still expect the company to clearly meet its guidance, according to which adjusted EBIT will grow from 2024. We estimate that earnings growth in the coming years will be moderate compared to the strong consecutive earnings growth seen in the last 10 quarters. Although the company will continue its efficiency program for at least another

year, we believe the effects of the most straightforward measures are already largely reflected in the actualized earnings figures.

Stronger balance sheet may provide opportunity for hybrid redemption

In its Q2 report, HKFoods did not comment on its intentions regarding the redemption of the hybrid bond, though the company did state that it is still analyzing the option. The redemption window will open in mid-September. In our view, the company might now have the opportunity to redeem the hybrid bond given the stronger cash flow than we expected in H1. Calculated using Q2 figures, net debt/EBITDA was 2.5x, which would weaken to 2.9x if the hybrid were redeemed. There is a thin cushion to the covenant (3x), however. According to our calculations, the net gearing covenant would remain intact as well. We have also calculated these figures based on the end-of-Q3 situation, which likewise supports the possibility of redeeming the hybrid bond. Redeeming the hybrid would save the company financing costs and could alter shareholders' perception of the company's risk and value creation profile. We have included the hybrid's quick redemption in our forecasts, but there is no quarantee that it will occur.

Valuation rather tight, but there is upside potential

HKFoods' current earnings-based valuation (adj. EV/EBIT 2025e: 10x, P/E: 21x) is not particularly attractive, but as the balance sheet strengthens and financing costs decline, P/E-based multiples will decrease rapidly. With a fair P/E ratio of 10x applied to 2027, the share's expected return would be roughly in line with the required return. We consider our current estimates to be relatively low-risk. In a positive scenario, earnings growth could continue to exceed our forecasts, which would have a significant leverage effect on the share price. Our change in recommendation also partly reflects the expected impact of the hybrid redemption on the market's required return on the share, which could positively affect the share price.

Earnings improved in a challenging environment

Operating environment was not conducive to growth

Q2 revenue was 246 MEUR, down 3.5% year-on-year. This decline was driven by the food industry strike at the beginning of the quarter, the shortage of beef, and the impact of the cool early summer on demand for barbecue products. In addition, exports declined relative to the high volumes in the comparison period, which was affected at the time by the postponement of deliveries from Q1'24 to Q2 due to port strikes. Poultry exports to China progressed as planned, and volumes are already substantial. According to the company, consumer demand in the retail channel strengthened slightly from the early part of the year, but food service remained at the same level as in the comparison period, and sales at service stations suffered due to cold weather.

For comparison, Atria Finland's revenue declined by 2% in Q2, but we estimate that the port strikes in H1'24 had a slightly greater impact on HKFoods than on Atria.

EBIT improved but was slightly below our forecast

Adjusted EBIT for Q2 improved significantly to 6.5 MEUR (Q2'24: 4.4 MEUR), positively impacted by increased operational efficiency, supported by investments and a better sales mix (fewer exports). Conversely, challenges in beef availability, higher prices, and labor disputes in the food industry weakened profitability. The gross margin improved significantly to 8.0%, continuing the trend seen in previous quarters (Q2'24: 6.7%). The company recorded costs affecting comparability of 0.3 MEUR related to the termination of employment, resulting in a reported EBIT of 6.2 MEUR.

Net financial expenses amounted to 3.7 MEUR and were slightly lower than our forecasts, which, together with lower taxes than we estimated, supported the net result. Earnings per share of EUR 0.01 were in line with our expectations.

Cash flow stronger than we expected

Cash flow from business operations (including discontinued operations) was 21.2 MEUR, a significant improvement year-on-year (Q2'24: 13.1 MEUR). Net working capital is now 14 MEUR lower than a year ago, supporting the company's cash position and the key figures used in debt covenants (net debt/EBITDA: 2.5x). We interpreted that the company does not anticipate a reversal of the positive working capital trend in the near future, as frozen beef inventories are likely to remain low. In our analyses of the hybrid bond, we have, of course, sought to take into account the typical seasonal increase in inventory levels in Q3, e.g., due to stockpiling Christmas hams.

Lähde: Inderes

We expect more moderate earnings growth going forward

We slightly increased our earnings forecasts and expedited redemption of the hybrid bond

- We slightly lowered our revenue estimates for 2025-27 (by around 2%) due to lower-than-expected revenue in Q2.
- Our EBIT forecasts rose slightly (1–4%), as the company demonstrated further progress in its turnaround during Q2.
- Our EBIT forecast for H2 is 1 MEUR lower than a year ago due to factors such as rising beef prices and strong results in the comparison period, but we still expect the company to clearly meet its guidance, according to which adjusted EBIT will grow from 2024.
- We estimate that earnings growth in the coming years will be moderate compared to the strong consecutive earnings growth seen in the last 10 quarters. Although the company will continue its efficiency program for at least another year, we believe the effects of the most straightforward measures are already largely reflected in the actualized earnings figures. We forecast EBIT growth of only 5% and 3% for 2026-27. There could be room for improvement in the profitability margin relative to competitors' levels, but on the other hand, HKFoods' ROI is already quite close to that of its competitors, which we believe limits the potential for capital-light earnings growth.
- We adjusted our balance sheet estimates to reflect our assumption that the hybrid bond will be redeemed in September 2025. This will positively impact earnings per share, especially in our 2025-26 forecasts.

HKFoods Oyj, Q2'25

Valuation: The story continues

On the way to becoming a defensive dividend company

HKFoods has recently taken significant steps to become a defensive, dividend-paying company in the medium term. The decline in red meat consumption will be slow and the consumption of poultry and further processed foods will increase, but in the long term, the market does not offer significant growth. Moderate growth can still be achieved, e.g., by investing in certain growth segments, like poultry and ready meals. The meat and food industries in general are competitive and capital-intensive industries where it is difficult to achieve a sustainable ROCE above the required return.

Increasing evidence of a profitability turnaround

HKFoods' earnings have continued to improve clearly for 10 quarters. Although the company's historical earnings level has been weak, we find it likely that the recent improvement in earnings is mostly permanent. The company's strategic focus is now more tightly on one market area, and the company's financial resources to invest in efficient operations have also improved significantly compared to the past.

Although we forecast a fairly stable EBIT margin, we also see the potential for continued profitability improvement closer to the level of competitors. The adj. EBIT margin is now 3.2% (2025e), which is lower compared to e.g. Atria Suomi and Snellman (both EBIT 2024: 4.7%). If HKFoods succeeded in raising its profitability to the level of its competitors, the share price would have upside potential of up to approximately 80% from the current level, assuming a fair valuation level of EV/EBIT 9x. We consider the scenario unlikely, and it reflects the significant impact of leverage on

the fair value of the stock in different scenarios. It should also be noted that HKFoods' ROI has already closed the gap relative to its competitors'. Therefore, we believe that achieving an EBIT margin comparable to that of its competitors would require the company to make significant, capital-intensive investments, limiting the potential return on the share relative to the above scenario.

Improving balance sheet efficiency could bolster the market's perception of the company's enhanced quality

We find HK Foods' EV/EBIT (2025e: 10x) with this year's estimates to be close to the fair value and P/E is very high due to financial expenses (2025e: 21x). However, we believe that the moderate earnings growth we forecast for the coming years is sufficient to generate a reasonable annual return of around 9%, which can be considered average (assuming a fair P/E ratio of 10x for 2027). Our current Accumulate recommendation is based on the possibility of higher-than-expected earnings growth and the impending redemption of the hybrid bond, which we consider likely, though not certain.

Our DCF model indicates a valuation of EUR 1.74 for the share, supporting the view that the stock has upside. While the model requires the turnaround to prove sustainable, our long-term profitability assumption is slightly lower than the current level (terminal EBIT-%: 2.7%).

Factors supporting the valuation of HKFoods:

- Positive development in profitability
- Gradual strengthening of the balance sheet
- Potential to become a stable dividend company

Factors negatively affecting HKFoods' valuation:

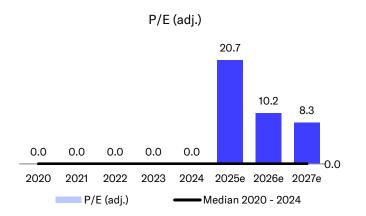

- The industry's moderate returns on capital and growth profile
- Historical profitability challenges
- Highish indebtedness and financial expenses

The market cap and enterprise value in the table consider the expected change in the number of shares and net debt for the forecast years. Per-share figures are calculated using the number of shares at year-end.

Disclaimer and recommendation history

The information presented in Inderes reports is obtained from several different public sources that Inderes considers to be reliable. Inderes aims to use reliable and comprehensive information, but Inderes does not guarantee the accuracy of the presented information. Any opinions, estimates and forecasts represent the views of the authors. Inderes is not responsible for the content or accuracy of the presented information. Inderes and its employees are also not responsible for the financial outcomes of investment decisions made based on the reports or any direct or indirect damage caused by the use of the information. The information used in producing the reports may change quickly. Inderes makes no commitment to announcing any potential changes to the presented information and opinions.

The reports produced by Inderes are intended for informational use only. The reports should not be construed as offers or advice to buy, sell or subscribe investment products. Customers should also understand that past performance is not a guarantee of future results. When making investment decisions, customers must base their decisions on their own research and their estimates of the factors that influence the value of the investment and take into account their objectives and financial position and use advisors as necessary. Customers are responsible for their investment decisions and their financial outcomes.

Reports produced by Inderes may not be edited, copied or made available to others in their entirety, or in part, without Inderes' written consent. No part of this report, or the report as a whole, shall be transferred or shared in any form to the United States, Canada or Japan or the citizens of the aforementioned countries. The legislation of other countries may also lay down restrictions pertaining to the distribution of the information contained in this report. Any individuals who may be subject to such restrictions must take said restrictions into account.

Inderes issues target prices for the shares it follows. The recommendation methodology used by Inderes is based on the share's 12-month expected total shareholder return (including the share price and dividends) and takes into account Inderes' view of the risk associated with the expected returns. The recommendation policy consists of four tiers: Sell, Reduce, Accumulate and Buy. As a rule, Inderes' investment recommendations and target prices are reviewed at least 2–4 times per year in connection with the companies' interim reports, but the recommendations and target prices may also be changed at other times depending on the market conditions. The issued recommendations and target prices do not guarantee that the share price will develop in line with the estimate. Inderes primarily uses the following valuation methods in determining target prices and recommendations: Cash flow analysis (DCF), valuation multiples, peer group analysis and sum of parts analysis. The valuation methods and target price criteria used are always company-specific and they may vary significantly depending on the company and (or) industry.

Inderes' recommendation policy is based on the following distribution relative to the 12-month risk-adjusted expected total shareholder return.

Buy	The 12-month risk-adjusted expected shareholder return of
	the share is very attractive

Accumulate The 12-month risk-adjusted expected shareholder return of the share is attractive

Reduce The 12-month risk-adjusted expected shareholder return of

the share is weak

Sell The 12-month risk-adjusted expected shareholder return of

the share is very weak

The assessment of the 12-month risk-adjusted expected total shareholder return based on the above-mentioned definitions is company-specific and subjective. Consequently, similar 12-month expected total shareholder returns between different shares may result in different recommendations, and the recommendations and 12-month expected total shareholder returns between different shares should not be compared with each other. The counterpart of the expected total shareholder return is Inderes' view of the risk taken by the investor, which varies considerably between companies and scenarios. Thus, a high expected total shareholder return does not necessarily lead to positive performance when the risks are exceptionally high and, correspondingly, a low expected total shareholder return does not necessarily lead to a negative recommendation if Inderes considers the risks to be moderate.

The analysts who produce Inderes' research and Inderes employees cannot have 1) shareholdings that exceed the threshold of significant financial gain or 2) shareholdings exceeding 1% in any company subject to Inderes' research activities. Inderes Oyj can only own shares in the target companies it follows to the extent shown in the company's model portfolio investing real funds. All of Inderes Oyj's shareholdings are presented in itemised form in the model portfolio. Inderes Oyj does not have other shareholdings in the target companies analysed. The remuneration of the analysts who produce the analysis are not directly or indirectly linked to the issued recommendation or views. Inderes Oyj does not have investment bank operations.

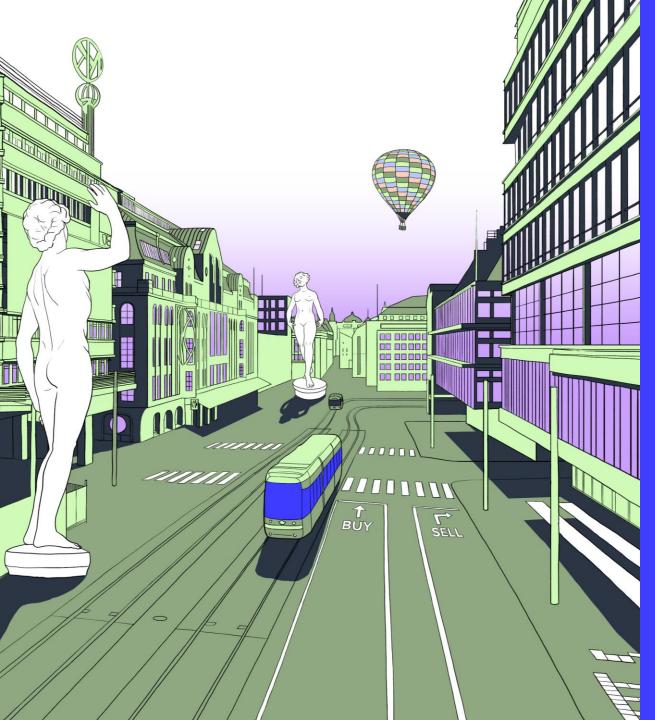

Inderes or its partners whose customer relationships may have a financial impact on Inderes may, in their business operations, seek assignments with various issuers with respect to services provided by Inderes or its partners. Thus, Inderes may be in a direct or indirect contractual relationship with an issuer that is the subject of research activities. Inderes and its partners may provide investor relations services to issuers. The aim of such services is to improve communication between the company and the capital markets. These services include the organisation of investor events, advisory services related to investor relations and the production of investor research reports.

More information about research disclaimers can be found at www.inderes.fi/research-disclaimer.

Inderes has made an agreement with the issuer and target of this report, which entails compiling a research report.
